Created: Monday May 14, 2012

BRER RABBIT'S BABY - Display Only - Great grower with good budcount. Its form and color saturation always please!

BR NO. 15 - Display Only - This Ned seedling was selected for introduction in 2008, but that didnt happen. 4 , 24 Ht, maroon, 19 BC, 3-way branching in FL. Please note the vast difference between this seedling and Long Tall Sally one of my favorite pics!:)

BR NO. 15 - VIEW 2 - Display Only - The intense curling and the unbelievable green throat are outstanding. I love the green on the inner sepals!

BR NO. 2 - Display Only - This Ned seedling was selected for introduction in 2008, but that didnt happen. FL stats: Early, 4, 21 Ht, dark purple, yellow/green throat, curly sepals, 13 BC in FL. Definitely higher BC up north, but someone/something cut off the top part of the most mature scape this year. Secondary branch had 10 buds. Extremely good substance and all around good plant. Fertile both ways. My personal favorite among the small dark reds and purples, this image shows more red than the deep purple that my eye sees.

BR NO. 3 - Display Only - [NR-JPS03] This Ned seedling was selected for introduction in 2008, but that didnt happen. 5, 32 Ht, purple, yellow/green throat, twisty sepals, reflexed petals, 13 BC, 3-way branching in FL. (May be higher up north(?))

CINCY'S PAT HENLEY - Display Only - (Bachman, 2007) Height 35", bloom 4.5", season M, Dormant, Diploid, 20 buds, 3 branches, Reddish purple with darker halo above yellow green throat. (sdlg Charon the Ferryman)

COUNTESS OF CUTE - Display Only - (Roberts-N., 2009) Height 28", bloom 5.75", season MLa, Dormant, Diploid, 17 buds, 5 branches, UFO Crispate, Rose bitone with yellow pale ruffled edge above green throat. (unknown unknown) Countess of Cute is one of the most recent registrations of Ned Roberts and has yet to be released.

D X CC (DAISY X CAT'S CRADLE) - Display Only - This has gained enough attention, I am proud to feature it on the 2012 National in Cindy Osmans Lady Hybridizers Bed. The flower is only 5-6, but it is sweet, sweet, sweet! Just look at those ruffles! Height is proportionate, about 28. Pod difficult, pollen fertile.

FLEUR DE ROCAILLE - Display Only - (Whitacre-JA., 1988) Height 30", bloom 4", season M, Dormant, Diploid, Bright blue pink and pale yellow dusted pink bitone with cerise and deep cream eyezone above green throat. ((Frances FayE Evelyn Claar) (Dorcus Ringlets)) Just look at the color and the size! Good budcount!

GADSDEN FIREFLY - Display Only - (Reinke-B., 2004) Height 34", bloom 3.5", season E, Dormant, Diploid, Fragrant, 35 buds, 5 branches, Golden copper blend with gold edge above orange throat. (sdlg Nutmeg Elf) Extremely fertile both ways.

HUMMINGBIRD - Display Only - (Benesh, 1955) Season M, Dormant, Diploid, Deep ruby red self. ((Wekiwa Kanapaha) Chivalry) While the AHS Checklist does not give a size, its 3-4, about 28 tall and well branched in my Zone 5 garden. I highly suspect that Ned Roberts used it in his small program.

IBIS - Display Only - Warrell, 2009 Height 42", bloom 5", season M, Dormant, Diploid, 14 buds, 3 branches, Unusual Form Cascade, Near white self above green throat. (Frozen Mert sdlg) New to the garden in 2010, I planted it too close to a killer peony. That peony has since been divided and hopefully will give Ibis more room to breathe. It still was a trooper though, it's pod fertile.:)

LITTLE RAINBOW - Display Only - (Reckamp, 1963) Height 24", bloom 2", season EM, Dormant, Diploid, Melon pink, cream, yellow and orchid polychrome with orange throat. Fertile both ways. I am using this because of its size and hoping to bring out its colors in the UF's.

MAL SMALL A - Display Only - 5", dark red with yellow/green throat, UF. No more stats available this year. This seedling has got to be out of (Nutmeg Elf x Spider Miracle) x Brer Rabbit's Baby. I expect it to be reasonably branched, as its parents. Fertile.

MAL SMALL C - Display Only - This one knocked my socks off this year with its color. Fertile both ways too.:)

MAL SMALL D - Display Only - 5", no other stats yet. Probably out of two seedlings (fleischel's black x Red Rain) x (Nutmeg Elf x Spider Miracle) Both pics are on my website.

MAL SMALL F - Display Only - 3", burgundy red with dark eye, yellow throat, UF. Unknown parentage, but most likely out of (Nutmeg Elf x Spider Miracle.) What a small, small size and cute form! Normal 0 MicrosoftInternetExplorer4

MAL SMALL G 2011 - Display Only - 3.5", dusty rose with yellow throat, UF. No more stats available this year. Probably out of (Nutmeg Elf x Spider Miracle.) Pod fertile, don't know about pollen.

MAL SMALL H - Display Only - All I can say is that this is out of spider breeding, probably has bridge plant Nutmeg Elf x Spider Miracle in it. Approximately 3.5" flower.

MAL SMALL I - Display Only - 4", yellow UF. (Nutmeg Elf x Spider Miracle) x (Nutmeg Elf x Spider Miracle). No more stats available this year, but I expect it to be well branched and very fertile both ways. WOW, what an improvement in form over Nutmeg Elf!

NE X SM (NUTMEG ELF X SPIDER MIRACLE) - Display Only - Normal
 0 MicrosoftInternetExplorer4 Normal 0 MicrosoftInternetExplorer4 /* Style
 Definitions */ table.MsoNormalTable {mso-style-name:"Table Normal";
 mso-tstyle-rowband-size:0; mso-tstyle-colband-size:0; mso-style-noshow:yes;
 mso-style-parent:""; mso-padding-alt:0in 5.4pt 0in 5.4pt; mso-para-margin:0in;
 mso-para-margin-bottom:.0001pt; mso-pagination:widow-orphan;
 font-size:10.0pt; font-family:"Times New Roman";} Ned laughed back when he
 heard the cross, but was approving of the appearance of the bloom. Always
 having been a bridge plant for me, Ive gotten some interesting things from it
 because it does give up its color. Extremely fertile both ways.

NR SMALL A - Display Only - 6, MLa, orange infused with red, green and
 yellow throat. UF, fatter and redder than Small F and Small I.

NR SMALL C - Display Only - 6 red spider, extended yellow green throat.

NR SMALL D - Display Only - 5" spider, sorry, but didn't take accurate
 stats this year. Im hoping that the lack of color in this one might enable it to
 give up its color and take on others.

NR SMALL E - Display Only - It was only at the end of this summer that I
 realized that this is BR No. 10, a Ned seedling that was selected for
 introduction in 2008, but that didnt happen. EE, 4 , 30 Ht, coral red, green
 throat, very curly segments. 3x rebloom!! 54 BC, 7-way branching. One of my
 personal favorites of the smalls, still in evaluation up north.

NR SMALL F - Display Only - 5-5.25", orange with yellow green throat, quilled petals and curly sepals. Very fertile. I suspect that NR Small F and NR Small I are the same plant, or at the very least, sibs.

NR SMALL I - Display Only - 5-5.25", orange with yellow green throat, quilled petals and curly sepals. Very fertile. I suspect that NR Small F and NR Small I are the same plant, or at the very least, sibs.

ORIENTAL EYES - Display Only - (Menges, 1997) Height 24", bloom 3", season M, Semi-Evergreen, Diploid, Fragrant, Lavender with light cream watermark and washed blue eyezone and dark purple band above a bright green throat. (Alpine Mist Jewel of Morning) Very good budcount, great scape. I'm hoping to bring the elusive "blues" into my small UF's.

SIR BLACKSTEM - Display Only - (Hager, 1988) Height 24", bloom 2.5", season E, Rebloom, Evergreen, Diploid, Yellow brown and brown yellow reverse bicolor. ((Pizza (sdlg Raindrop)) Gold Thimble) I've seen a couple of UF's registered out of SB, so I thought that a couple of crosses to bring down the size of the blooms might be worth a shot!

TEENIE GIRL - Display Only - (Reinke-B., 2004) Height 32", bloom 3", season MLa, Dormant, Diploid, Fragrant, 30 buds, 5 branches, Dark red with gold edge above deep green to gold throat. (sdlg Nutmeg Elf) ExTREMELY fertile!
