Created: Thursday December 15, 2011

JUST JESSIE - \$100 - 40" MRe7.5" dormant diploid, extended. Unusual form, cascade. This light pink-cream with a bright rose-purple feathered eye is tall, well-branched (3-4 way) with lots of buds. It has an extended bloom season, and often reblooms. It is a CMO, open on cold mornings, and has good substance even late at night. It stands up through 90-100 degree days and rain. It is consistently showy and dependable. It is named after Jessie Cohen, a daylily friend who had a great garden and gave me much encouragement and support. It is a great pollen parent (but hard to set seeds as a pod parent), passing on the eye and great plant habits to many seedlings. Probably out of Flight of Orchids.
