Created: Thursday December 15, 2011

AMBITION - \$100 - 45EMRE 7.5 SEV Diploid Twisted Crispate Unusual Form Aptly named for its absolute vigor and re-bloom here, this buff yellow with lavender red eye and green throat seems to always be in bloom. The petals and sepals twist and sometimes pinch, and it is very fragrant. It has two branches, terminal Y, and 26 buds, with moderate bud building. Out of SORAYA SELINE by HELGA BJORNERUD BURKEY. Pollen Fertile Pod Possible. Limited

JUST JESSIE - \$100 - 40"MR7.5" dormant diploid, extended. Unusual form, cascade. This light pink-cream with a bright rose-purple feathered eye is tall, well-branched (3-4 way) with lots of buds. It has an extended bloom season, and often reblooms. It is a CMO, open on cold mornings, and has good substance even late at night. It stands up through 90-100 degree days and rain. It is consistently showy and dependable. It is named after Jessie Cohen, a daylily friend who had a great garden and gave me much encouragement and support. It is a great pollen parent (but hard to set seeds as a pod parent), passing on the eye and great plant habits to many seedlings. Probably out of Flight of Orchids.

NEGATIVE IMAGE - \$110 - 37" M 6" Dormant Diploid Bicolor Cascade Unusual Form This red, yellow, and cream bicolor with cream midribs and green throat displays a very complex color pattern. On hot days, like its parents SANTAS PANTS by COMPLICATED, the edge bleaches to white, contrasting greatly with the complex red petals. This cultivar has the highest branching and bud-count of any of this series; 3 branches and 19 buds in average conditions and up to 5 branches in excellent conditions. It is very close to a spider, has blue green foliage, and is easily fertile both ways, passing on the complex color patterns. Hard dormant.

SPIRAL GALAXY - Sold Out - 40"MLRE6" Dormant Diploid Cascade Unusual Form A gorgeous blend of rose, pink and red with green throat and cream midribs. Registered with 5 way branching and 26 buds, it bud builds and can have 7 way branching and 40 buds. Out of LUCKY STREAK by KIRSTEN MADELAINE BURKEY, fertile, and blooms until very late season, with some re-bloom in September. Noticed for years by visitors under the garden name "LuckyKMB".

TECH COLORS - \$150 - 41 M7 SEVTetraploid Cascade Unusual Form
Thank you to Glenn Pollock for pushing me to introduce this one since its maiden bloom. It has proven to be remarkably visible in the garden, due to the tall scapes, bright orange color and striking, feathered reddish purple eye. It has colors matching Virginia Techs colors blasphemy!, here near UVA! 3 branches and 18 buds, that bloom long and slow, for a long season. Sun-fast, out of (ISLE OF DREAMS x TET CORAL CRAB)X FISH FACE. Unique genetics make this great garden plant also a hybridizers tool. Pollen fertile and pod possible. Limited

TOTAL SILENCE - \$125 - 39"MLRe6"dormant diploid cascade unusual form A sunfast lavender and raspberry with lemon cream throat and a ruffled cream edge. I went back and forth with whether it is raspberry or lavender and finally decided it is both. Registered with 3 branches and 18 buds, but more under good conditions, it also reliably re-blooms for us in September. Pollen Fertile, Pod Possible, out of MARGO REED INDEED by NORTH WIND DANCER.
